Digital High-Low

High and Low Pressure Limit Controller

Revised: May 3,2004

Operation Manual

Distributed By:

DESCRIPTION

The DIGITAL HIGH-LOW is the one controller for all you high and low limit applications. It opens and closes the valve according to limit pressure. The controller has changeable limit settings and offers readings up to 2000 PSI. The high and low current pressure readouts are easy to access through the versatile data button.

BUTTONS:

There are two limit and three operation buttons. The two limit buttons allow the operator to display or set high/low limits. Their designations and functions are as follows:

1. **“HIGH LIMIT”:**

Allows the operator to set/read the high limit. Manual open on high pressure, use UP and HIGH buttons to open valve when high pressure is present.

2. **“LOW LIMIT”:**

Allows the operator to set/read the low limit.

3. **“DATA”:**

Scroll through the data button to read High Count, Low Count, and Battery Voltage.

4. **“UP/DOWN”:**

Allows the operator to set/change all settings.
